## 2010 TAKES OFF

The year's opening exhibition in Frankfurt was again a great success. A large number of national and international distribution partners came to see our product innovations and developments on our eye-catching stand. No doubt we have started 2010 successfully.

## STREETS AHEAD

EBA 2331 is the newest shredder series on the scene. All three models shredding to 4mm, 4x40 and 2x15mm are 'real smooth runners' equipped with ECC control, EASY\_SWITCH and EBA Twin-Drive-System. Loaded with features and streets ahead in performance compared with the now defunct 2231, the unchanged prices mean exceptional value.

## THE SPECIALIST

EBA 0201 OMD – the perfect machine to destroy CD-ROMs and DVDs. Its particle size of 2.2 x 4 mm complies with the very strict North American security requirements according to NSA/CSS 04-02, and this new model has an extraordinarily high shred capacity of up to 2,500 CDs/DVDs per hour. The EBA 0201 OMD is immediately available.
